

ISOGRAM PROBLEM

Determine if a word or phrase is an isogram.

An isogram (also known as a "nonpattern word") is a word or phrase without a repeating letter, however spaces and hyphens are allowed to appear multiple times.

Examples of isograms:

- lumberjacks
- background
- downstream
- six-year-old

The word *isograms*, however, is not an isogram, because the s repeats.

Input (words.txt)

lumberjacks
background
isograms
downstream
six-year-old

Output

yes
yes
no
yes
yes
