Bob Problem

Bob is a lackadaisical teenager. In conversation, his responses are very limited.

Bob answers 'Sure.' if you ask him a question.

He answers 'Whoa, chill out!' if you yell at him.

He answers 'Calm down, I know what I'm doing!' if you yell a question at him.

He says 'Fine. Be that way!' if you address him without actually saying anything.

He answers 'Whatever.' to anything else.

Bob's conversational partner is a purist when it comes to written communication and always follows normal rules regarding sentence punctuation in English.

Assume there exists a data file called **bob.txt** with an undetermined number of statements which Bob will respond to.

Input (bob.txt)
How are you today?

WHAT ARE YOU DOING
I just returned from shopping.
WHAT'S YOUR NAME?

Output
Sure
Fine. Be that way!
Whoa, chill out
Whatever
Calm down, I know what I'm doing!
